### **Globalisation, Public Opinion and the State**

This is first integrated book-length account of citizen responses to the new global order. Based on a comprehensive survey, administered at the end of 2000, in nine European and nine Asian countries, this book demonstrates the diverse responses to globalization, within, and between, two of the world's major – and most globally integrated – regions. Globalization, Public Opinion and the State is a pioneering empirical study, drawing on 18,000 interviews across these 18 European and Asian countries supported by the Japanese Ministry of Education. The Asian-Europe Survey is one of the largest of its kind ever conducted, and provides the book with a wealth of novel data on public opinion and social attitudes that identify the linkages between national/regional policy responses and the political and policy orientations of the publics affected. The book uses theoretical insights to situate these public responses and reactions to globalization; and it addresses one question in particular: do nation states matter in how citizens come to view regional and global engagement? Rather than offering another theory about globalization, this book presents much-needed empirical findings that help us decide between arguments about the public impact of globalization cross-nationally. This book breaks new ground as there no other comprehensive study in this field.

Biology and Management of Invasive Quagga and Zebra Mussels in the Western United States is a synthesis of the biology and management of invasive mussels from scientists and managers working on invasive quagga and zebra mussels in the western United States. Invasive dreissenid mussels have spread throughout southwestern United States at unprecedented speeds, and present a unique threat to native ecosystems. This book documents the efforts, both successful and unsuccessful, of individuals and agencies after dreissenid mussels invaded the West. Although the book is designed specifically for scientists and managers fighting invasive mussels in western waterbodies, it offers an opportunity for scientists and lake managers worldwide to compare successful strategies relevant to their unique situation. It includes guidance documents and protocols related to early detection, prevention, regulation, monitoring, and control of these invasive pests in the West. It compares quagga and zebra mussels in the western United States with those mussels colonizing the Great Lakes and European waters.

Ernesto Macaro brings together a wealth of research on the rapidly expanding phenomenon of English Medium Instruction. Against a backdrop of theory, policy documents, and examples of practice, he weaves together research in both secondary and tertiary education, with a particular focus on the key stakeholders involved in EMI: the teachers and the students. Whilst acknowledging that the momentum of EMI is unlikely to be diminished, and identifying its potential benefits, the author raises questions about the ways it has been introduced and developed, and explores how we can arrive at a true cost–benefit analysis of its future impact. “This state-of-the-art monograph presents a wide-ranging, multi-perspectival yet coherent overview of research, policy, and practice of English Medium Instruction around the globe. It gives a thorough, in-depth, and thought-provoking treatment of an educational phenomenon that is spreading on an unprecedented scale.” Guangwei Hu, National Institute of Education, Singapore Additional online resources are available at [www.oup.com/elt/teacher/emi](http://www.oup.com/elt/teacher/emi) Ernesto Macaro is Professor of Applied Linguistics at the University of Oxford and is the founding Director of the Centre for Research and Development on English Medium Instruction at the university. The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as “21st century skills,” these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

“The ones who are able to see the high meaning of beauty are cultural people. However, the chosen one is the one who sees only one thing in beauty: the Beauty itself” said one of the most famous English poets, writers, playwrights, a bright and inimitable Oscar Wilde (1854-1900). Oscar Wilde is the author of not only the world famous novel “Portrait of Dorian Gray”, but also of beautiful fairy tales combining the rich imagination of the writer and the ironic style of narration. Every detail has a symbolic meaning and beauty, along with the good, acts as an inseparable whole. Tales give the most complete picture of Wilde's vivid multifaceted talent; these works are graceful, ghostly poetic “symbolist” tales. They sing the beauty of good deeds, sympathy for the offended and humanity. Wilde is also famous for such works as “Puffy Rocket”, “Infanta's Birthday”, “Nightingale and the Rose”, “Princess's Birthday”, “Faithful Friend”, “Young King”, “The Prince and the Swallow”, “The Egoist Giant” and “Star Boy”.
