Economics

This book offers a critical introduction to the core technologies underlying the Internet from a humanistic perspective. It provides a cultural critique of computing technologies, by exploring the history of computing and examining issues related to writing, representing, archiving and searching. The book raises awareness of,

and calls for, the digital humanities to address the challenges posed by the linguistic and cultural divides in computing, the clash between communication and control, and the biases inherent in networked technologies. A common problem with publications in the Digital Humanities is the dominance of the Anglo-American perspective. While seeking to take a broader view, the book attempts to show how cultural bias can become an obstacle to innovation both in the methodology and practice of the Digital Humanities. Its central point is that no technological instrument is culturally unbiased, and that all too often the geography that underlies technology coincides with the social and economic interests of its producers. The alternative proposed in the book is one of a world in which variation, contamination and decentralization are essential instruments for the production and transmission of digital knowledge. It is thus necessary not only to have spaces where DH scholars can interact (such as international conferences, THATCamps, forums and mailing lists), but also a genuine sharing of technological know-how and experience. \"This is a truly exceptional work on the subject of the digital....Students and scholars new to the field of digital humanities will find in this book a gentle introduction to the field, which I cannot but think would be good and perhaps even inspirational for them....Its history of the development of machines and programs and communities bent on using computers to advance science and research merely sets the stage for an insightful analysis of the role of the digital in the way both scholars and everyday people communicate and conceive of themselves and \"others\" in written forms - from treatises to credit card transactions.\" Peter Shillingsburg The Digital Humanist is not simply a translation of the Italian book L'umanista digitale (il Mulino 2010), but a new version tailored to an international audience through the improvement and expansion of the sections on social, cultural and ethical problems of the most widely used methodologies, resources and applications. The most significant domestic issue of the 2004 elections is unemployment. The United States has lost nearly three million jobs in the last ten years, and real employment hovers around 9.1 percent. Only one political analyst foresaw the dark side of the technological revolution and understood its implications for global employment: Jeremy Rifkin. The End of Workis Jeremy Rifkin's most influential and important book. Now nearly ten years old, it has been updated for a new, post-New Economy era. Statistics and figures have been revised to take new trends into account. Rifkin offers a tough, compelling critique of the flaws in the techniques the government uses to compile employment statistics. The End of Workis the book our candidates and our country need to understand the employment challenges-and the hopes-facing us in the century ahead.

The End of Work

For well over two hundred years, Joseph Haydn has been by turns lionized and misrepresented - held up as celebrity, and disparaged as mere forerunner or point of comparison. And yet, unlike many other canonic composers, his music has remained a fixture in the repertoire from his day until ours. What do we need to know now in order to understand Haydn and his music? With over eighty entries focused on ideas and seven longer thematic essays to bring these together, this distinctive and richly illustrated encyclopedia offers a new perspective on Haydn and the many cultural contexts in which he worked and left his indelible mark during the Enlightenment and beyond. Contributions from sixty-seven scholars and performers in Europe, the Americas, and Oceania, capture the vitality of Haydn studies today - its variety of perspectives and methods - and ultimately inspire further exploration of one of western music's most innovative and influential composers.

Introduction to Journalism

A brilliant new book from the bestselling author of The Tipping Point and Blink Why are people successful? For centuries, humankind has grappled with this question, searching for the secret to accomplishing great things. In this stunning new book, Malcolm Gladwell takes us on an invigorating intellectual journey to show us what makes an extreme overachiever. He reveals that we pay far too much attention to what successful people are like, and too little attention to where successful people are from: their culture, their family, and their generation. Gladwell examines how the careers of Bill Gates and the performance of world-class football players are alike; what top fighter pilots and The Beatles have in common; why so many top lawyers are Jewish; why Asians are good at maths; and why it is correct to say that the mathematician who solved Fermat's Theorem is not a genius. Just as he did in Blink, Gladwell overturns many of our conventional notions and creates an entirely new model for seeing the world. Brilliant and entertaining, this is a landmark work that will simultaneously delight and illuminate.

This book investigates how the media have become self-referential or self-reflexive instead of mediating between the real or fictional worlds about which their messages pretend to be and between the audience that they wish to inform, counsel, or entertain. The concept of self-reference is viewed very broadly. Self-reflexivity, metatexts, metapictures, metamusic, metacommunication, as well as intertextual, and intermedial references are all conceived of as forms of self-reference, although to different degrees and levels. The contributions focus on the semiotic foundations of reference and self-reference, discuss the transdisciplinary context of self-reference in postmodern culture, and examine original studies from the worlds of print advertising, photography, film, television, computer games, media art, web art, and music. A wide range of different media products and topics are discussed including self-promotion on TV, the TV show Big Brother, the TV format \"historytainment,\" media nostalgia, the documentation of documentation in documentary films, Marilyn Monroe in photographs, humor and paradox in animated films, metacommunication in computer games, metapictures, metafiction, metamusic, body art, and net art.

'Ella darling, There are things I have concealed from you up till now that I think you ought to know; things that have turned me from a different person from the Ronald you know.' So, in April 1918, Ronald Skirth, a non-commissioned officer in the Royal Artillery, wrote to his sweetheart, back in England. A year before, Skirth, then just nineteen years old, had been sent to fight on the Western Front. This is his story, the story of a young man who went to war a devoted servant of King and country and returned utterly convinced that war, all war, was wrong and who acted upon his convictions, making a pact with God that he would not kill. This riveting memoir was written fifty years after the end of the war, drawing on his own contemporary diary entries and letters home. Never published before, it affords a vivid, moving and surprising insight into that most dreadful of conflicts.

The Reluctant Tommy

We are living in a modern world where falsehood regularly seems to overwhelm truth. The ability of billions of people to publish has created a vast amount of unreliable and false news which now competes with and sometimes drowns more established forms of journalism. So where can we look for reliable, verifiable sources of news and information? What does all this mean for democracy? And what will the future hold? Reflecting on his twenty years as editor of the Guardian at a time of unprecedented digital disruption; and his

experience of breaking some of the most significant news stories of our time, Alan Rusbridger answers these questions and offers a stirring defence of why quality journalism matters now more than ever.

Examples of work from award-winning illustrators showcase a huge range of applications, from the author's own collaboration with the British Museum of Natural History and Olivier Kugler's Portraits of Syrian Refugees in Iraqi Kurdistan, to Levi Pinfold's fictional picture book Black Dog and Malika Favre's promotional images for the BAFTA (British Academy of Film and Television Arts) Film Awards.
